

Move F&A teams beyond spreadsheets without replacing the ERP.

EPTech builds practical AI agents that automate invoice processing, month-end close, reconciliations, FP&A reporting, CFO dashboards, and audit evidence workflows while keeping finance leaders in control.

PRACTICAL IMPACT TARGETS

30-60%

reduction in manual effort for a selected workflow

20-50%

reduction in cycle time for close, approvals, or reporting

4-8 wks

typical pilot window after workflow selection

0 ERP

replacement required for the first implementation

The finance bottleneck

Mid-market and smaller companies often grow faster than their finance operating model. The result is manual work that quietly absorbs expensive team capacity every month.

Close depends on spreadsheets

Trackers, reconciliations, variance notes, and support files are updated manually across teams.

Reporting arrives late

FP&A spends days assembling data instead of explaining what changed and what to do next.

Approvals stall

Invoices, accrual inputs, and evidence requests get stuck in inboxes and chat threads.

Audit support is recreated

Evidence lives across ERP exports, emails, shared drives, tickets, and spreadsheets.

Exceptions are late

Duplicate invoices, unusual entries, and missing documentation are often found after review cycles begin.

Leadership waits

CFOs and operators wait for answers because trusted data is trapped inside manual pipelines.

Workflows EPTech can cover

We start with one high-value workflow, prove measurable ROI, then expand into adjacent F&A processes.

AP invoice intake and coding

Accounting

Read invoices, match vendors and POs, suggest GL coding, route approvals, and flag exceptions.

40-70% less manual handling time

Month-end close and reconciliations

Close

Track tasks, collect support, match transactions, draft variance explanations, and surface blockers.

20-50% faster coordination and review

FP&A reporting and commentary

Finance

Generate recurring management packs, KPI tables, variance narratives, and source-linked commentary.

30-70% less reporting assembly time

Internal audit and compliance

Audit

Request evidence, map controls, perform first-pass support review, and draft workpapers or findings.

30-60% less documentation effort

AR cash application and collections

Working capital

Match remittances, identify unapplied cash, prioritize collections, and draft follow-up messages.

30-60% less cash application effort

CFO dashboards and board reporting

Executive

Connect governed metrics to a live executive view and reduce recurring ad hoc reporting requests.

Faster answers with stronger traceability

ROI calculator

Estimate annual capacity created from one targeted workflow. Use the presets for small or mid-sized firms, then adjust the assumptions.

Assumptions	
People in workflow	3
Time spent on manual work	35%
Fully loaded hourly cost	\$65
Manual effort reduced	40%
Working weeks per year	48

Small firm workflow estimate	
Best for small finance teams automating one recurring F&A workflow.	
2,016 manual hours currently spent per year	806 annual hours saved after automation
\$52K annual capacity value created	5.0 person-months of capacity returned
This is a directional planning estimate. Final ROI depends on transaction volume, system access, data quality, control design, and how much of the workflow is suitable for automation.	

Pilot options

The best first pilot is narrow enough to ship quickly and important enough that the CFO or controller can feel the difference.

Close and reconciliation agent

4-6 weeks. Automates close tracking, support collection, reconciliation prep, variance drafts, and controller visibility.

AP invoice and approval agent

4-8 weeks. Automates invoice extraction, vendor matching, coding suggestions, approval routing, and exception queues.

FP&A reporting agent

4-6 weeks. Automates recurring reporting packs, KPI tables, variance commentary, and source-linked management views.

Internal audit evidence agent

6-8 weeks. Automates evidence requests, control mapping, first-pass testing support, and workpaper drafts.

AR and cash application agent

4-8 weeks. Automates remittance matching, unapplied cash queues, collections prioritization, and follow-up drafts.

CFO dashboard prototype

3-6 weeks. Creates governed executive visibility from existing ERP, spreadsheet, and operating data sources.

Implementation path

EPTech keeps the first engagement practical: diagnose the workflow, build the pilot, measure ROI, then expand only where value is proven.

01 Diagnostic Map workflows, systems, pain points, control gates, and measurable success criteria.	02 Pilot design Select one use case, define data access, review steps, exception rules, and ROI baseline.
03 Agent build Connect to existing tools, automate the repeatable work, and preserve human approval points.	04 Scale Measure savings, strengthen governance, and expand into adjacent workflows.

CLIENT-FACING OFFER

Start with a 2-hour F&A AI diagnostic.

EPTech will map current finance workflows, identify the top 3 automation opportunities, estimate time and cost impact, and recommend the fastest pilot to prove ROI.
